

What will user's pokemon do?

포켓몬 exp를 얻고고 레벨 업 할때 첫번째 포켓몬을 진화시켜줘서 HP를 올려주자

포켓몬 HP가 100이상이면 진화시키는 함수를 만들어서 계속적으로 호출한다. battle_with_gym_leader는 밑에로 global 하게 check function name: evolve_pokemon()

event occurred():
bool = random.choices(True, False) # 50%의 확률
return bool

generate_event():
event_type = random.choices("wild pokemon", "stranger", "team rocket") # 33%의 확률
if event_type == "stranger":
battle_with_stranger()
elif event_type == "team rocket":
battle_with_team_rocket()
elif event_type == "wild pokemon":
catch_wild_pokemon()
Else:
input "select direction" (get_user_choice())

if event_occured():
event_type = generate_event()
if event_type == "stranger":
battle_with_stranger()
elif event_type == "team rocket":
battle_with_team_rocket()
elif event_type == "wild pokemon":
catch_wild_pokemon()
Else:
input "select direction" (get_user_choice())

=> happening inside game()

keep functions short (within 10-15 line) by doing RETURN as early as possible
